

Cutting-edge software, modern design principles

Team by DevEvolvedSM

Team by DevEvolved is the evolution of the software development team giving you customized talent on demand for your project.

The Team by DevEvolvedSM approach

In today's world of agile software development, there are technology staffing challenges without many innovative ways to solve them. Team by DevEvolvedSM is such a solution. It gives project owners access to the necessary talent by creating an individualized team of experienced management and development consultants in a way that avoids the complexities and potential cost overruns.

- ◆ Work is always done as needed on an hourly basis
- ◆ Everyone in a single team has the same hourly rate
- ◆ Prior approval is needed for any hours used
- ◆ Purchasing more hours can reduce the hourly rate

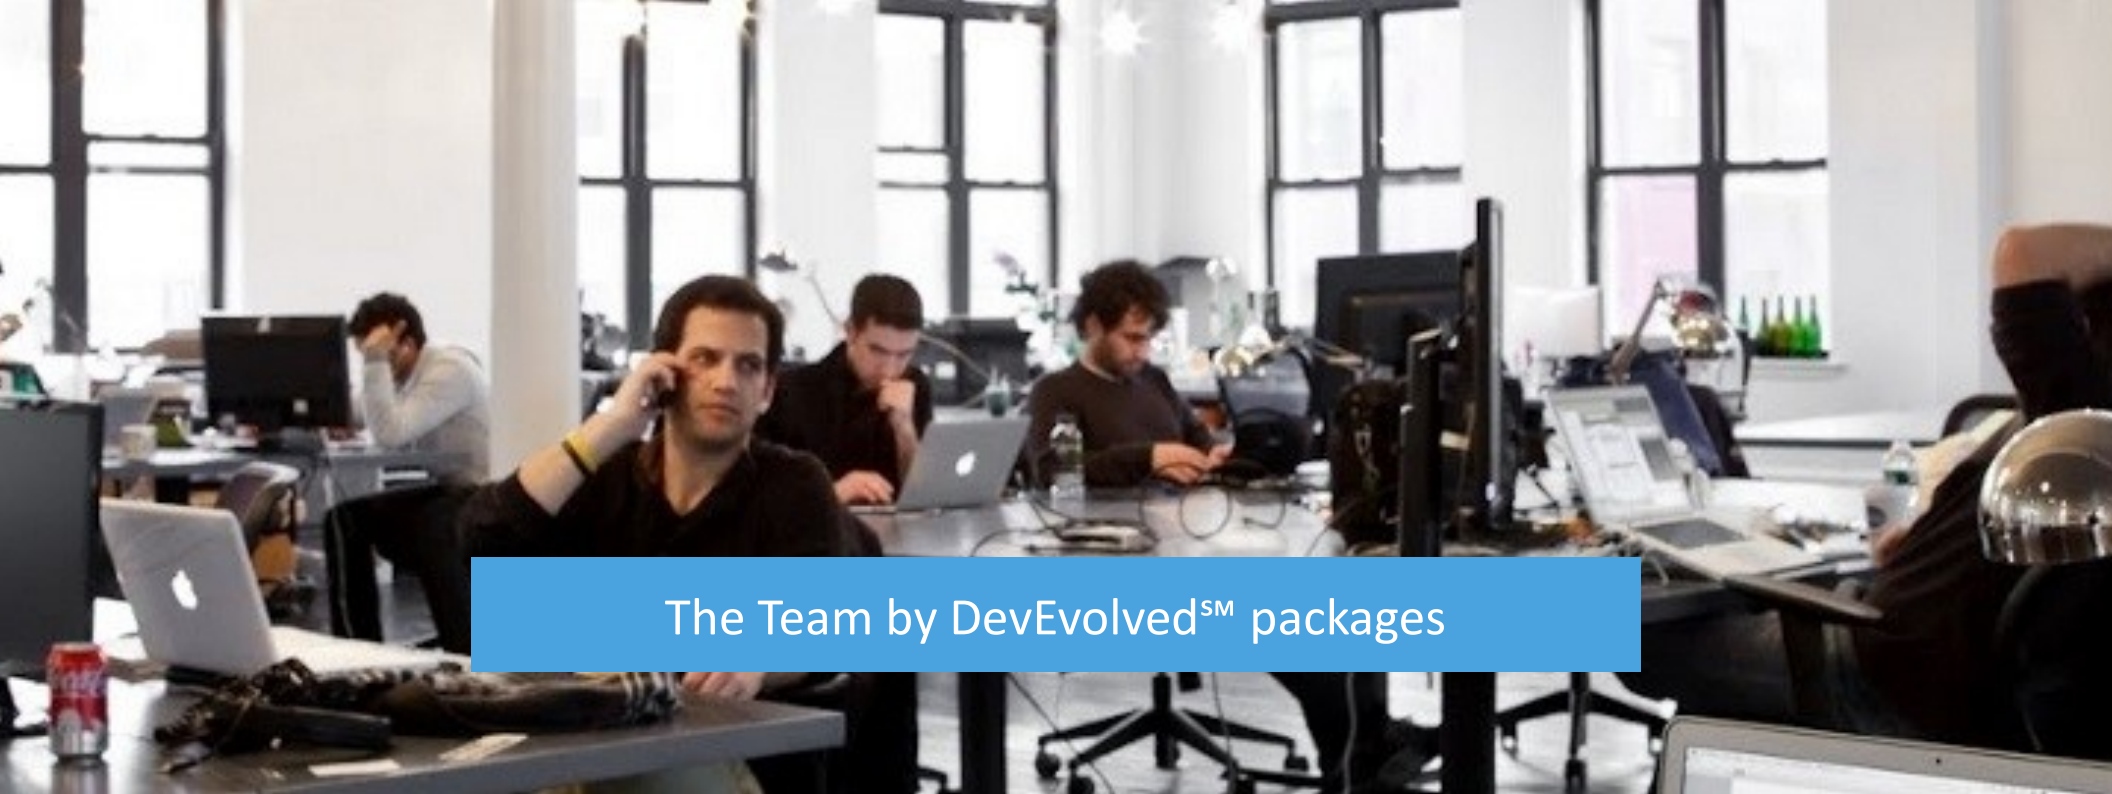

How the Team by DevEvolvedSM approach works

The Team by DevEvolvedSM approach allows you control over how and when your hours are used in order to effectively manage the project.

- ◆ First, you choose your package of pre-paid hours
- ◆ Next, a project lead is assigned who works directly with you to create a written roadmap which includes timelines and estimated costs based on your project objectives
- ◆ Finally, the project lead will put together your individualized team to complete your project
- ◆ During the project lifetime, the project can be adjusted to handle changes in demand and priorities on a weekly basis

The Team by DevEvolvedSM packages

The Team by DevEvolvedSM packages are an effective way to provide reliable on-demand access to an entire team of technology specialists without the complexities involved with trying to find and manage that team.

Package	Starter	Essentials	Plus	Enterprise
